The global Handheld Time Domain Reflectometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Handheld TDR is a valuable tool for maintaining and troubleshooting electrical conductors in various industries, ensuring proper signal transmission, minimizing downtime, and maintaining the overall performance and reliability of communication and power systems.

A Handheld Time Domain Reflectometer (TDR) is a portable electronic testing device used to measure the characteristics of electrical conductors such as cables, wires, and transmission lines. The primary function of a handheld TDR is to determine the length, impedance, and location of faults within these conductive pathways by sending out a pulse signal and analyzing the time it takes for the reflected signal to return.
