The handheld turbidimeter is a compact and handheld device used for measuring the turbidity or cloudiness of a liquid on-site or in the field. It is designed to provide quick and convenient turbidity measurements in various applications, including environmental monitoring, water quality testing, and field research.

Water resources are one of the indispensable and irreplaceable resources for the development of human society, and problems such as population growth, climate change and industrial pollution have led to the shortage of water resources and the deterioration of water quality. Assurance of water quality and safety through analysis and testing is critical to public health and ecosystems. The rapid development of the water quality monitoring industry has also driven the development of water quality analysis instruments, increasing the demand for handheld turbidimeters.
