Abstracts

The global Handheld Ultrasonic Leak Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Handheld ultrasonic leak detector is a portable device that is used to detect and locate the source of ultrasonic sound waves that are emitted by leaks in various systems, including pipes, valves, tanks, and other equipment that handle fluids or gases. The detector works by using a microphone to pick up the ultrasonic sound waves that are emitted by the leak, which are then converted into an audible sound that can be heard by the operator. The operator can then use the intensity of the audible sound to locate the source of the leak.
