According to our (Global Info Research) latest study, the global Handheld Ultrasonic Spot Welder market size was valued at US\$ 21.23 million in 2025 and is forecast to a readjusted size of US\$ 25.92 million by 2032 with a CAGR of 2.9% during review period.

Ultrasonic hand-held spot welders actually belong to the category of ultrasonic welding, which uses ultrasonic waves to generate high-frequency vibrations to weld two materials, metal or plastic, together. For hot-formed parts without assembly contours, or parts whose geometry and actual conditions exclude the possibility of standard welding operations, ultrasonic spot welding is relatively more suitable for processing. The general ultrasonic spot welding equipment is a small machine, which is relatively light to operate and does not require high manual technology. It is convenient to store after use and does not take up a lot of space. Ergonomics and lightweight handheld probes can reduce operator fatigue. The lightweight system with an integrated handle makes the device easy to move and easy to move in the factory.
