Handheld X-Ray imaging device is a small or micro X-ray machine that performs imaging based on X-ray principles. They are mainly used for non-destructive testing and rapid safety inspections in the medical field and can be easily carried and used. These devices usually consist of X-ray sources, detectors, data processors, displays and controllers. The working principle is based on the penetrability and reflection principles of X-rays. The X-ray source produces high-energy X-rays, which penetrate the object and are reflected to the detector. The detector converts the received signal into an electrical signal, which is then processed by a data processor. Processing and finally displaying the X-ray image of the object on the monitor.
