The global Handheld X-Ray Imaging Device market size is expected to reach \$ 100.1 million by 2029, rising at a market growth of 9.4% CAGR during the forecast period (2023-2029).

In the global market, the core vendors of handheld X-ray imaging equipment are mainly Delft Imaging, MIKASA, Fujifilm, ect. The top three players in this industry account for about 40% of the market share. North America, Europe, and Asia-Pacific are the major manufacturing regions for this product, with Asia-Pacific accounting for about 30% of the global market share. The product can be categorised into push-button and touch-screen based on the type of product. The product can be used in both military and civilian applications.

Handheld X-Ray imaging device is a small or micro X-ray machine that performs imaging based on X-ray principles. They are mainly used for non-destructive testing and rapid safety inspections in the medical field and can be easily carried and used. These devices usually consist of X-ray sources, detectors, data processors, displays and controllers. The working principle is based on the penetrability and reflection principles of X-rays. The X-ray source produces high-energy X-rays, which penetrate the object and are reflected to the detector. The detector converts the received signal into an electrical signal, which is then processed by a data processor. Processing and finally displaying the X-ray image of the object on the monitor.

This report only studies handheld X-ray imaging equipment used for human medical use and used for body extremities.
