According to our (Global Info Research) latest study, the global Handset Power Amplifiers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Handset Power Amplifiers used to support various operating modes like UMTS, CDMA, GSM/EDGE LTE and multiple frequency bands which offer premium performance with very small form factor. Most of the power amplifiers for the mobile applications are been manufactured using gallium arsenide based bipolar transistor and a comparatively small number of handset power amplifiers are being manufactured using silicon CMOS. CMOS does offer the tantalizing possibility of having much higher levels of integration and comparatively lower cost to GaAs. The growth of handset power amplifier market is highly reliant on the increasing internet penetration globally.

Increased internet penetration is one of the major driver for the growth of the handset power amplifiers market. Growing demand for the higher network bandwidth and continuously increasing M2M communication are the key growth drivers for this market. Therefore, the continued global migration from 2G to 3G devices is also one of the main factor anticipated to catalyze the growing demand of different handset power amplifiers during the forecast period from 2017 to 2025. In addition, growth of the audio and video conference using the notebook platform is also anticipated to increase the demand of handset power amplifiers in the upcoming years. In turn this is also projected to affect the market of handset power amplifiers in a positive manner during the forecasted period.
