According to our (Global Info Research) latest study, the global Hang Gliding Harness market size was valued at USD 24 million in 2022 and is forecast to a readjusted size of USD 35 million by 2029 with a CAGR of 5.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hang gliding is an aerial sport or recreational activity in which a pilot flies a hang glider, a light, non-motorized, foot-operated heavier-than-air aircraft. To construct the wings, most modern hang gliders use an aluminum alloy or hybrid material frame wrapped with synthetic canvas. Pilots usually hang from the fuselage with seat belts and control the plane by resting their weight on the control rack. Surging desire for extreme adrenaline activities is one of the major reasons driving the global hang glider market. The global glider market has grown steadily over time owing to the increasing popularity of intense sporting activities. Moreover, leading market companies are focusing on producing attractive and novel hang gliding equipment, which is beneficial to drive the growth of the market. In addition, the intricacies of the natural environment inspired manufacturers to create technically superior hang gliding equipment. Adventure sports have always been important when it comes to recreational activities. Additionally, lifestyle changes lead to increased stress and illness, which exacerbates the need for high-adrenaline sports such as gliding. Moreover, as people's spending power increases, so does travel and tourism, which is driving the popularity of adventure sports. Changing lifestyles, increasing awareness about the importance of leisure activities, and rising disposable funds among the population are expected to support market growth.

A hang gliding harness is a set of straps used for protecting the pilot. They are the bracket that is latched to pilot with a snap hook located under the hang glider. In hang

gliding, the harness is suspended from the airframe. Hang gliding was an unsafe sport before harnessing came into existence.
