Abstracts

The global Hanger Bearing market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hanger bearings are used as rotational bearings for drive and screw-conveyor shafts. Typically, these industrial shafts are enclosed with a housing or conveyor trough. Hanger bearings are comprised of a split-roller bearing in a cast iron split-housing with a threaded boss that provides suspension for the conveyor cross-bracing. A swivel fixing at the cross-bracing joint is recommended to provide alignment of the bearings. Frames for hanger bearings mount at the top or to the side of the housing. The bearing is suspended to the center for shaft mounting. Hanger bearings are used extensively in agricultural applications and heavy industry. They are also used in automotive assemblies, aircraft assemblies, and marine driveshaft assemblies.

This report studies the global Hanger Bearing production, demand, key manufacturers, and key regions.
