Haptic feedback motor drivers are electronic components that control vibration motors to create tactile sensations in devices, such as smartphones, game controllers, and wearables. These drivers manage the power and signal timing delivered to actuators like ERM (Eccentric Rotating Mass) or LRA (Linear Resonant Actuator) motors, allowing for precise, customizable vibration patterns. By converting digital input into physical feedback, they enhance user experience through touch-based interaction, offering responses such as clicks, alerts, or immersive effects in virtual environments.
