Abstracts

Hardware as a service (HaaS) is an innovative, contemporary offering that eliminates the stress and expense of buying hardware. This affordable, managed solution is a rental agreement that combines maintenance and support with the latest technology. In the hardware as a service model, hardware is installed at the client's site along with a service level agreement between the client and managed service provider (MSP). In this service model, either the client pays a monthly fee for using the hardware, or its use is incorporated into the MSP's fee structure for installing, monitoring, and maintaining the hardware. According to the service level agreement, if the hardware breaks down or becomes outdated, the MSP is responsible for decommissioning it and replacing it by wiping proprietary data or physically destroying hard drives.
