Abstracts

Hardware OTP authentication is a two-factor authentication solution that enables secure remote network access and digital signature functionality with the help of a physical hardware authenticator or a secure token. Hardware OTP utilizes a separate device or a security token issued to a user to generate a password that acts as a second factor for authentication.

Scope of the Report:

This report studies the Hardware OTP Token Authentication market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Hardware OTP Token Authentication market by product type and applications/end industries. Hardware OTP tokens are a product category within the two-factor authentication sector, primarily used for ensuring user authentication and access management applications. Primary authentication is followed by the secondary authentication using a hardware device. Since user login authentication without the possession of hardware devices is not allowed, hardware tokens are reliable in ensuring authenticated user login. Further, hardware OTP tokens are highly instrumental in preventing any chance of network infiltration. The portability factor associated with these hardware devices also eliminates the need for external software and hardware for identity management. The enhanced level of security provided by these tokens is a significant factor reinforcing their demand across the various end-user industries around the world.
