Abstracts

According to our (Global Info Research) latest study, the global Hardware Random Number Generator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A hardware random number generator is a device or apparatus that generates truly random numbers through physical processes rather than algorithms. Unlike pseudo-random numbers generated by software, a hardware random number generator generates a random number sequence based on the uncertainty of physical phenomena, which makes the generated numbers more unpredictable and secure. It usually contains one or more physical sources (such as thermal noise, quantum effects, etc.), and collects data from these physical sources through electronic or optical means, and then converts them into random numbers in digital form.
