According to our (Global Info Research) latest study, the global Harmonic Gear Mount market size was valued at US\$ 61.12 million in 2025 and is forecast to a readjusted size of US\$ 117 million by 2032 with a CAGR of 9.9% during review period.

Harmonic gear mounts are high-precision, compact rotating support structures that use harmonic gear transmission (SWG) technology. They are widely used in telescopes, electric optical platforms, industrial robots, and high-end tracking systems. Its core features are high reduction ratios, zero backlash, and extremely high positioning accuracy through the coupling of flexible gears and wave generators, which allows stable and smooth motion even in extremely subtle angle control. Compared with traditional worm gears, planetary gears and other structures, harmonic mounts provide better dynamic response and repeatable positioning performance with smaller size and lighter weight. They are particularly suitable for astronomical tracking, radar antenna adjustment, satellite ground station tracking, surgical robotic arms and other fields that require extremely high motion accuracy and low vibration. With the growing demand for intelligent optoelectronic devices and small precision platforms, harmonic gear mounts are becoming one of the key actuators in advanced control systems.
