Harpagophytum Procumbens Extract is a plant extract produced from the roots and secondary tubers of Harpagophytum procumbens, commonly known as devil's claw, through water extraction, alcohol extraction, concentration and drying processes, with CAS No. 84988-65-8. Its main active components are iridoid glycosides such as harpagoside, and common specifications include ordinary ratio extracts and standardized extracts with specified harpagoside content.

Its upstream mainly includes Harpagophytum procumbens roots and secondary tuber raw materials, extraction solvents such as water and ethanol, excipients such as maltodextrin, concentration and drying equipment, plant extraction equipment, testing instruments and packaging materials. Raw material supply is significantly affected by wild harvesting in southern Africa, sustainable collection practices, origin control and export trade. The midstream covers the production and processing of Harpagophytum Procumbens Extract, mainly including raw material cleaning, crushing, extraction, filtration, concentration, drying, milling, sieving, standardization and quality testing. The downstream mainly serves food, Medicine, cosmetics and other health care fields, among which the food sector is mainly represented by dietary supplements, functional foods and health foods.
