According to our (Global Info Research) latest study, the global HART Temperature Transmitter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Compared with ordinary temperature transmitters, HART temperature transmitter products have intelligent functions. They use frequency shift keying (FSK) technology to superimpose digital signals on 4-20mA current signals to realize monitoring near instruments or in control rooms and on-site. Direct communication between instruments can read instrument information, instrument setting information, process variables, and configure and manage instruments. Digital communication does not affect the transmission and output accuracy of 4-20mA analog signals, which brings great convenience to system debugging and field equipment maintenance and management, and is compatible with the original analog system.
