According to our (Global Info Research) latest study, the global Hawthorn Leaf Flavonoids (HLF) market size was valued at US\$ 28.98 million in 2025 and is forecast to a readjusted size of US\$ 40.44 million by 2032 with a CAGR of 5.0% during review period.

Hawthorn Leaf Flavonoids (HLF) refers to a flavonoid-rich fraction obtained from hawthorn leaves (*Crataegus* spp., and in some Asian supply chains specifically *Crataegus pinnatifida* leaves). It is a mixture of flavonoids and flavonoid glycosides, commonly represented by vitexin derivatives, vitexin, rutin, and hyperoside; commercial materials are often standardized/quantified by “total flavonoids” or by multi-marker assays.

Upstream raw material is primarily dried hawthorn leaves (and in the EU herbal drug system often hawthorn leaf with flower, *Crataegi folium cum flore*), requiring botanical authentication and consistent harvesting/quality control of the plant material.

Downstream, flavonoid-standardized hawthorn leaf preparations are used as traditional herbal medicinal products for specified traditional indications, and hawthorn leaf flavonoids are also widely used in herbal/dietary supplement products.

In 2025, global sales of Hawthorn Leaf Flavonoids (HLF) reached approximately 1,083 tons, with an average global market price of around US\$ 26/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 40%.
