According to our (Global Info Research) latest study, the global HBM Controller IP market size was valued at US\$ 172 million in 2025 and is forecast to a readjusted size of US\$ 843 million by 2032 with a CAGR of 25.8% during review period.

HBM Controller IP refers to a high-bandwidth memory controller intellectual property that is designed to efficiently manage the communication between a host processor and high-bandwidth memory modules. This IP is crucial for systems that require fast data transfer rates and low latency, such as high-performance computing, artificial intelligence, and networking applications. The HBM Controller IP optimizes memory access and data movement, ensuring that the system can fully leverage the capabilities of high-bandwidth memory technology. By integrating this IP into their designs, developers can achieve superior performance and scalability in their products.

Driven by the continuous development of technologies such as artificial intelligence and high-performance computing, the demand for HBM Controller IP will also increase, and its market size is expected to grow accordingly.

With the continuous advancement of artificial intelligence technology, especially the rise of large - language models, the demand for high - performance, high - density memory in AI training and inference is increasing. HBM Controller IP, which can provide high - speed data transmission and efficient memory management, is crucial for meeting the memory bandwidth requirements of AI accelerators and graphics processing units (GPUs). For example, the newly - released HBM4 controller IP can support the advanced feature set of HBM4 devices, enabling designers to address the demanding memory bandwidth requirements of next - generation AI accelerators and GPUs. The

continuous miniaturization of semiconductor technology has led to an increase in the complexity and performance requirements of integrated circuits. HBM Controller IP, as a key component of memory management systems, needs to continuously improve its performance and functionality to adapt to the development of semiconductor technology.
