According to our (Global Info Research) latest study, the global HCFCs market size was valued at USD 655.3 million in 2023 and is forecast to a readjusted size of USD 439.4 million by 2030 with a CAGR of -5.6% during review period.

Hydrochlorofluorocarbons, commonly known as HCFCs, are a group of man-made compounds containing hydrogen, chlorine, fluorine and carbon. They are not found anywhere in nature. HCFC production began to take off after countries agreed to phase out the use of CFCs in the 1980s, which were found to be destroying the ozone layer. Like CFCs, HCFCs are used for refrigeration, aerosol propellants, foam manufacture and air conditioning.

While many HCFCs are in the list of controlled substances, only HCFC-22, -123, -124, -141b and -142b are consumed in significant quantities.

The major players in global HCFCs market include Dongyue Group, Zhejiang Juhua, Meilan Chem, etc. The top 3 players occupy about 55% shares of the global market. Asia-Pacific is the main market, and occupies about 80% shares of the global market. HCFC-22 is the main type, with a share about 80%. Food and Health Industry is the main application, which holds a share about 80%.
