Abstracts

HD fisheye lens is an extreme ultra-wide-angle lens, which has two main characteristics: short focal length (16mm or less), large field of view (field of view 180 degrees to 270 degrees). It is a special kind of lens in the super wide-angle lens, and its angle of view strives to reach or exceed the range that the human eye can see. Therefore, there is a big difference between the fisheye lens and the real world scene in people's eyes, because the scene we see in real life is a regular and fixed shape, and the picture effect produced by the fisheye lens is beyond this category .

This report studies the global HD Fisheye Lens production, demand, key manufacturers, and key regions.
