The global HD Video Analog Front End (AFE) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Video Analog Front End (VAFE) is an electronic system that processes analog video signals from a camera or other video source. An HD Video Analog Front End (AFES) is a type of VAFE that is specifically designed to handle high-definition (HD) video signals.

An HD Video AFES typically includes a set of analog processing circuits that can perform functions such as amplification, filtering, and synchronization of the video signal. These circuits are designed to work with the specific characteristics of HD video signals, which typically have higher resolutions, faster refresh rates, and more complex color information than standard-definition (SD) video signals.
