According to our (Global Info Research) latest study, the global HDMI Active Optical Cables market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

HDMI Active Optical Cables (AOCs) are high-speed data transmission cables that use fiber optic technology to carry high-definition multimedia interface (HDMI) signals over longer distances than traditional copper cables. They contain a light source, usually a laser or LED, at one end to convert the HDMI signal into light signals, which are then transmitted through an optical fiber to the other end, where they are converted back into an HDMI signal. AOCs are used in professional AV installations and home theater setups that require high bandwidth and resistance to interference.
