About Head-up Display (HUD), A head-up display (HUD) is a device enabling augmented reality (AR) benefits for the driver in order to enhance safety by reducing distractions while driving. It overlays the data on the transparent glass screen and ensures that the driver can view the information without diverting their vision off the road. The real-world data overlay is placed in front of user's focal viewpoint.

One of the key drivers responsible for The market's growth is the increasing demand for AR-HUDs. Augmented reality (AR) based HUDs consist of sensors (LiDAR-based), cameras, Wi-Fi, and GPS modules. GPS and Wi-Fi are integrated to connect with the road infrastructure and other vehicles, while sensors and cameras are used to detect, guide, and monitor the environment and pedestrian movements. The AR-HUDs on the driver's windshield provides a comprehensive view in the form of both real scene and a computer-generated virtual scene. This technology enhances driver-assistance systems such as blind spot detection, notifications for upcoming lane changes, and exit directions.
