According to our (Global Info Research) latest study, the global Headless Ecommerce Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A headless ecommerce system includes core functionalities such as inventory, product management, and a shopping cart, but allows those features to be deployed quickly and easily to multiple platforms, such as a brand's website, Facebook, Amazon, and any other place online where customers can make purchases.

The headless ecommerce system helps companies manage this by using APIs to push consistent copy, images, and layouts from a single back-end system to each platform. This way, they don't need to reconfigure their branding manually as they reach out to customers across the web. Beyond that, the system allows transactions to take place wherever the customer may be, leading to a more organic experience and more conversions.

According to International Telecommunication Union (ITU), the global Internet users (online population) were more than 5 billion. And the number of online shoppers was also increasing. In 2022, the global e-commerce market penetration rate increased to 19.7%, and the e-commerce market reached \$5.5 trillion. At the same time, the Asian e-commerce market ranked at the top of the revenue ranking, which has reached \$1.8 trillion. According to the National Bureau of Statistics, China was the largest online retail market in 2022, with online retail sales of 13.79 trillion yuan and a year-on-year increase of 4%. Among them, the online retail sales of physical goods were 11.96 trillion yuan, with a year-on-year increase of 6.2%, which accounted for 27.2% of the total retail sales
