Abstracts

The global Headphones market size is expected to reach \$ 126006 million by 2032, rising at a market growth of 9.2% CAGR during the forecast period (2026-2032). Earphones and headphones are electrical accessories worn on the ear, which when connected with electrical appliances such as mobile phones, tablets, laptops, MP3 players etc. give direct concentrated sound output. With increasing adoption of mobile phones and tablets there is a significant growth observed in the adoption of earphones and headphones. Earphones and headphones are of two types ? wired and wireless. Wired earphones and headphones are connected to the electrical device with the help of a wire while wireless earphones and headphones are connected to the electrical device via Bluetooth. These earphones and headphones include behind-the-head, over-the head and in-ear.
