Headspace vials and caps are specialized laboratory containers designed for use in headspace analysis, a technique employed to analyze volatile compounds in gas chromatography. The vials are typically made of glass or high-quality plastic and come in various sizes, usually sealed with air-tight caps that ensure the sample's integrity. The caps often feature septa, which allow for the insertion of a syringe to extract the gas sample without contaminating the vial's contents. These vials and caps are essential in analytical chemistry for applications in environmental testing, pharmaceuticals, food and beverage analysis, and forensic science, providing a reliable method for capturing and analyzing the gaseous phase of a sample.
