Abstracts

Cloud computing is the practice of using a network of remote servers hosted on the internet, to store, manage, and process data. It does not require or use a local server and significantly reduces the overall cost by cutting infrastructural costs. In addition to one-time set-up cost, maintenance cost is also huge in case of cloud. Healthcare has the ability to generate quantum of data, from patient background information, to image and video data, each and every fraction of second. To effectively store, as well as process this data, advanced computer with more computation power is required, and to have such systems in healthcare institution, healthcare providers will have to invest much more than what they have invested.
