The global Healthcare CMMS Software market size is expected to reach \$ 731 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Healthcare CMMS (Computerized Maintenance Management System) software is used to manage and optimize equipment maintenance operations in hospitals, clinics, and healthcare facilities. It tracks equipment performance, schedules preventative maintenance, manages work orders, and ensures regulatory compliance. This software helps extend asset lifespan, reduce downtime, and improve operational efficiency, thereby enhancing the safety and reliability of healthcare services. The upstream of the industry chain includes software development tools, cloud platforms, and database systems; the midstream involves software customization, system integration, testing, and deployment; and the downstream applications cover hospitals, clinics, nursing homes, and healthcare providers, offering training, maintenance, and technical support services. The gross profit margin of major companies in the industry ranges from 50% to 70%.

The healthcare CMMS software market is driven by the increasing need for efficient maintenance management of medical equipment, regulatory compliance, and patient safety. Hospitals and healthcare facilities adopt these platforms to reduce equipment downtime, optimize asset utilization, and ensure timely preventive maintenance. Technological advancements, such as cloud-based solutions, mobile accessibility, and IoT integration, enhance monitoring, reporting, and operational efficiency. Growing healthcare infrastructure investments and the push for digital transformation further support market growth. Vendors focus on user-friendly interfaces, customization, and interoperability with existing hospital systems. Overall, the market is expected to grow

steadily as healthcare providers prioritize reliable, efficient, and data-driven maintenance management solutions.
