Health informatics is a multidisciplinary field of science that uses information technology to improve the functions of health care with the help of higher quality and higher efficiency. It includes disciplines such as computer science, behavioral science and management science. It is also known as medical informatics, biomedical informatics, nursing informatics, or clinical informatics. Patient monitoring devices monitor patient's health and assist the medical practitioners in deciding the treatment regimen and also track the disease progression during the treatment. These devices are useful in the management of post-acute care and chronic diseases.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
