Heart failure referred to as congestive heart failure (CHF). This occurs when the heart is unable to pump sufficiently to maintain blood flow to meet the body's needs. Congestive heart failure is a chronic disorder that directly affects the pumping power of heart muscles. CHF mainly refers the part in which fluid rises around the heart and causes it force unproductively. Heart failure software is designed to manage patients safely and efficiently. This software supports the patient journey from hospital to community documenting diagnosis; referral; assessment; progress monitoring; healthcare professional liaison regarding discharge or transfer; and the follow-up and monitoring of patients in a range of healthcare settings including hospital, Primary Care Physician, community clinics and home visits.

The heart failure software market is rising considerably owing to changing health care system. Growing necessity for constant health assessment and active developments in technology has introduced numerous uses of clinical decision support system such as heart failure software system. This software provides support to patients for monitoring in cardiac activity and examining risk zone of patients with cardiac diseases. The activities such as assessment, communications between physicians for treatment, Documenting, follow up, and so on are carried out by heart failure software. Therefore, to reduce the paperwork this software is used by cardiac clinics, hospitals, and other clinical amenities for constant monitoring and assessment of patients. Also, this software are easy to use software as they saves time on administration, measure

quality of care and also provides excellent support, which in turn fosters the market growth existing pool of patients survived with heart attack; rising geriatric population who are more susceptible to heart failure and increasing awareness about heart failure software can create lucrative opportunities for the market growth.
