Abstracts

A heart-lung machine is used in open heart surgeries to support the proper functioning of the heart and body during the surgery. The heart-lung machine consists of a chamber that receives blood from the body, oxygenates the blood, and transfers it to all parts of the body. This machine is connected to the patient with a series of tubes, which is removed after the completion of the surgery when the heart and lungs resume its functions.

Scope of the Report:

This report focuses on the Heart-Lung Machines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes The market based on manufacturers, regions, type and application. The recent increase in medical tourism, especially in APAC, is a noteworthy factor that will spur the prospects for growth in this market over the next few years. In recent times, it has been observed that the prevalence of cardiovascular diseases has increased significantly owing to the changing lifestyle in emerging economies like China and India. As these markets are currently experiencing a growing need for improved healthcare facilities, patients can access affordable healthcare services easily. Healthcare organizations in APAC offer affordable treatment, which attracts patients from developed countries such as the UK, Canada, and the US. Consequently, vendors like LivaNova have started to penetrate The market in APAC to increase their market shares.

Another factor impelling the growth prospects for this market is the advent of portable heart-lung machines. Portable heart-lung machines weigh less than conventional heart-lung machines and occupy less space in the operating room when compared to

conventional heart-lung devices. These devices will be extensively used by end users from the healthcare sector as they help to reduce the economic burden on hospitals. Additionally, as these devices have the capability to operate through a rechargeable battery, they can be transported to any part of the hospital. The portability of such devices helps the physicians to provide extracorporeal circulation to patients who are in critical stage or condition.

The worldwide market for Heart-Lung Machines is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
