Abstracts

The heart model is a simulated medical human body model. It is an adult heart model. The model is in a diastolic state. It is placed on a stent and can be rotated horizontally. Below the coronary sulcus, a section of the anterior wall of the ventricle is taken to show the internal structure of the left and right ventricles. The epicardium has been removed to show the direction of myocardial fibers and the heart vortex. Help students understand the external shape and internal structure of the heart, as well as the relationship between the large blood vessels entering and leaving the heart and blood circulation.

This report studies the global Heart Model production, demand, key manufacturers, and key regions.
