The global Heat-Conducting Oil Boiler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Heat-Conducting Oil Boiler refers to a boiler that uses thermal oil for heating. Generally, coal, oil, and gas are used as fuel, and thermal oil is used as the medium. The hot oil circulating oil pump is used to force the medium to circulate in the liquid phase. The heat energy is transferred to the heating equipment and then returned to the heating furnace for reheating. It has the characteristics of obtaining low pressure. High operating temperature and capable of high-precision control of media operation.
