According to our (Global Info Research) latest study, the global Heat Exchange Corrosion Inhibitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Heat Exchange Corrosion Inhibitors (heat exchange corrosion inhibitors) are special chemicals that can be used to prevent corrosion and damage of metal materials inside heat exchangers. Heat exchangers are commonly used in industrial production to heat or cool fluid media. In the process of use, the medium will come into contact with the metal material inside the heat exchanger, which is easy to lead to corrosion and damage under long-term action, thus affecting the normal operation of the heat exchanger. In order to solve this problem, heat exchange corrosion inhibitors can be used to form a protective film by adding some special chemicals to prevent the medium from coming into direct contact with the metal material, so as to protect the heat exchanger. Commonly used heat exchange corrosion inhibitors include organic film forming agents, corrosion inhibition additives, etc. Heat exchange corrosion inhibitors are widely used in petroleum, chemical, energy and other fields.
