Ceramic fiber paper is made from the special ceramic fiber that contains little residue, through process such as slurrying, removing residue, mixing slurry, long-mesh shaping, vacuum dehydrating, drying, cutting and rolling.

Ceramic fiber is a lightweight insulating material known for its excellent thermal resistance, low thermal conductivity, and resistance to thermal shock. It has various industrial applications, including in the aerospace, metallurgy, petrochemical, and manufacturing sectors. The ceramic fiber market has witnessed steady growth due to its versatility and use in a wide range of industrial applications. It is used for insulation, lining, and fireproofing in industries such as steel, petrochemical, glass, and foundries.Energy efficiency and sustainability are crucial factors driving the adoption of ceramic fiber materials. These materials are used in industrial furnaces, kilns, and thermal equipment to improve energy efficiency and reduce heat loss. The aerospace and automotive industries use ceramic fiber materials for thermal insulation and lightweight components. As these industries continue to advance, the demand for ceramic fiber products may increase.
