Abstracts

A heat pipe is a closed evaporator-condenser system consisting of a sealed, hollow tube whose inside walls are lined with a capillary structure or wick. Thermodynamic working fluid, with substantial vapor pressure at the desired operating temperature, saturates the pores of the wick in a state of equilibrium between liquid and vapor. When heat is applied to the heat pipe, the liquid in the wick heats and evaporates. As the evaporating fluid fills the heat pipe hollow center, it diffuses throughout its length. Condensation of the vapor occurs wherever the temperature is even slightly below that of the evaporation area. As it condenses, the vapor gives up the heat it acquired during evaporation. This effective high thermal conductance helps maintain near constant temperatures along the entire length of the pipe.

Scope of the Report:

This report focuses on the Heat Pipes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes The market based on manufacturers, regions, type and application. The growth of the HVAC industry will be one of the major factors that will have a positive impact on The market's growth. Heat pipes are used in HVAC systems to recover energy from the cooling and heating phases. The increasing demand for heat controlling and air conditioning equipment will drive the need for HVAC controls, which will subsequently increase the demand for heat pipes. Additionally, the increasing demand for air quality monitoring systems from developing countries, which facilitates the reduction of respiratory diseases, will also fuel The market's growth prospects. The growing use of loop heat pipe (LHP) and pulsating heat pipes (PHP) in avionic systems will be one of the latest trends that will gain traction in the heat pipes market

during the next four years. To attain long-distance and reliable heat transfer, the modern avionic systems require high-end thermal management systems which are supported by LHPs and PHPs. Additionally, advantages such as enhanced heat transfer, less power consumption, and increased system reliability, will also increase the adoption of LHPs and PHPs in avionics.

The worldwide market for Heat Pipes is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
