Abstracts

According to our (Global Info Research) latest study, the global Heat Pipe market size was valued at USD 2844 million in 2023 and is forecast to a readjusted size of USD 3845 million by 2030 with a CAGR of 4.4% during review period.

A heat pipe is a closed evaporator-condenser system consisting of a sealed, hollow tube whose inside walls are lined with a capillary structure or wick. Thermodynamic working fluid, with substantial vapor pressure at the desired operating temperature, saturates the pores of the wick in a state of equilibrium between liquid and vapor. When heat is applied to the heat pipe, the liquid in the wick heats and evaporates. As the evaporating fluid fills the heat pipe hollow center, it diffuses throughout its length. Condensation of the vapor occurs wherever the temperature is even slightly below that of the evaporation area. As it condenses, the vapor gives up the heat it acquired during evaporation. This effective high thermal conductance helps maintain near constant temperatures along the entire length of the pipe.

Global Heat Pipe key players include Furukawa, Aavid, Fujikura, Cooler Master, AVC, etc. Global top five manufacturers hold a share over 70%.

Asia-Pacific is the largest market, with a share over 45%, followed by Europe and North America, both have a share over 40%.
