Heat Pump Drying System is an energy-efficient drying solution that uses a heat pump cycle to recover and reuse thermal energy during moisture removal. Compared with conventional drying methods, it can reduce energy consumption, improve temperature control, and support gentle drying of heat-sensitive materials. It is widely used in food, agriculture, timber, pharmaceuticals, and industrial material processing.

The industrial chain of Heat Pump Drying System includes upstream compressors, evaporators, condensers, fans, control systems, insulation materials, and drying chambers. Midstream covers thermal design, refrigeration integration, cabinet assembly, airflow optimization, testing, and commissioning. Downstream applications mainly include food drying, agricultural processing, timber treatment, pharmaceuticals, seafood processing, and industrial material dehydration.
