Abstracts

The device used to pull heat from a lower temperature zone and deliver it to a higher temperature zone is known as a heat pump. These heat pumps use refrigerant in closed or open cycle, which acts as an intermediate medium of heat exchange between source and destination. Heat pumps are of various types such as working on the basis of heat source, air source, water source, ground source, and hybrid.

Scope of the Report:

This report focuses on the Heat Pump in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes The market based on manufacturers, regions, type and application. Growth of the construction industry along with increasing implementation of stringent new building regulations by governments worldwide, especially in China, Japan, U.S., South Korea, and Europe are expected to be the key factors driving demand for heat pumps for residential applications. In countries such as Japan, Australia, U.S., and countries of Europe, governments are providing subsidies on purchase of heat pumps in order to reduce their carbon footprint and increase use of renewable sources of energy for heating and cooling purposes. Also, certain countries like Japan and China have their own renewable energy policies for heating purposes, which promote the use of heat pumps over conventional heating devices. Lack of consumer awareness along with higher initial installment costs are expected to restrain The market growth over the period. Technical difficulty in installing these units in existing infrastructures is also a major restraint for the overall growth. Lack of government support in some regions is also a key factor restraining the demand.

The worldwide market for Heat Pump is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
