Abstracts

The global Heat Resistant Bronze Powder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Heat resistant bronze powder refers to powder made of various types of bronze or brass alloys, mainly used in lacquer or glazing medium, or together with copper powder paste (BRONING LIQOID) to form so-called imitation gold powder pigments. This powder can be used to replicate every shade of gold from light blonde, lemon to dark copper tones, sometimes with some dye added to the paint mix as well. Bronze powder will darken or fade in a short time. Bronze powders are rarely used in fine art because of their lack of permanence, and because the lacquers they make are dull and poorly grained.

This report studies the global Heat Resistant Bronze Powder production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Heat Resistant Bronze Powder, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
