Heat Resistant Double-sided Tape is a tape used for repair and maintenance of hot items such as electrical wiring. It has viscous areas on both sides. Made of materials such as aluminum and polyimide, it provides electrical insulation, masking, and other functions. There are various types of tapes depending on their thickness and hardness. Harder and thinner tapes are more resistant to displacement. Also, softer and thicker tapes are more resistant to unevenness. Some tapes can withstand high heat up to 1,000°C, while others are thin Heat Resistant Double-sided Tape with a thickness of less than 50 μ. It is important to choose the right one for your purpose, taking adhesiveness and flame resistance into consideration.
