According to our (Global Info Research) latest study, the global Heat Resistant Polymethyl Methacrylate market size was valued at USD 374 million in 2023 and is forecast to a readjusted size of USD 447.1 million by 2030 with a CAGR of 2.6% during review period.

Polymethyl Methacrylate (PMMA) is a thermoplastic polymer of Methyl Methacrylate (MMA). It is a clear, strong and lightweight plastic generally used as a substitute to glass due to its energy efficiency and weather resistance. Heat resistant grade is a special grade of PMMA for excellent resistance to high temperature and to surface scratching. Outstanding transparency and weatherability are equivalent to general PMMA. This material is applied to parts that require high thermal stability such as high intensity lamps. The disadvantages of general-purpose grade PMMA are insufficient surface hardness, poor heat resistance, and low impact strength. The heat-resistant grade PMMA can withstand temperatures in excess of 110 degrees Celsius.

Global key players of heat resistant polymethyl methacrylate include Rohm, Trinseo, Mitsubishi Chemical, Chi Mei, etc. Global top five manufacturers hold a share over 70%. In terms of product, injection grade is the largest segment, with a share over 74%. And in terms of application, the largest application is transportation, with a share over 49%.
