A Heat Shrink Wrap Tunnel is a type of packaging machine used to shrink plastic film tightly around products using heat. The tunnel, often part of a larger shrink wrapping system, contains a conveyor belt that transports items through a heated chamber. As the products pass through the tunnel, the heat causes the shrink wrap (typically made from PVC, polyolefin, or polyethylene) to contract and conform closely to the shape of the items, creating a sealed, protective layer around them. Shrink wrap tunnels are commonly used in industries like food and beverage, pharmaceuticals, electronics, and consumer goods.
