## Abstracts

According to our (Global Info Research) latest study, the global Heat Sinks market size was valued at US\$ 15800 million in 2024 and is forecast to a readjusted size of USD 21280 million by 2031 with a CAGR of 4.4% during review period.

A heat sink (also commonly spelled heatsink) is a passive heat exchanger that transfers the heat generated by an electronic or a mechanical device to a fluid medium, often air or a liquid coolant, where it is dissipated away from the device, thereby allowing regulation of the device's temperature at optimal levels. In computers, heat sinks are used to cool central processing units or graphics processors. Heat sinks are used with high-power semiconductor devices such as power transistors and optoelectronics such as lasers and light emitting diodes (LEDs), where the heat dissipation ability of the component itself is insufficient to moderate its temperature.

Global Heat Sinks key players include TE Connectivity, Aavid Thermalloy, Delta, CUI, etc. Global top four manufacturers hold a share over 5%.

China is the largest market, with a share over 45%, followed by Europe, and North America, both have a share about 30 percent.

In terms of product, Aluminum Heat Sink is the largest segment, with a share over 50%. And in terms of application, the largest application is Automobile Industrial, followed by Electronic Industrial, etc.
