According to our (Global Info Research) latest study, the global Heat Treated Flour market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Heat-treated flour is a new technology in the improvement of flour quality. Heat treatment of flour can change the quality characteristics of flour, and can also sterilize the flour, which may further replace the traditional chlorine treatment. In addition, heat-treated flour can also replace the higher-priced starch.

Heat-treated flour enables food manufacturers to replace the chemically modified ingredients in foods and mixtures, thereby satisfying consumers and improving the product performance. Heat-treated flour is characterized by its ability to absorb moisture and its protein content that cannot form gluten when the flour is hydrated.

Generally, heat-treated flour is divided into wet heat-treated flour and dry heat-treated flour according to the type of heat treatment.

For the major players of heat treatment flour, the Cofco maintained its first place in the ranking with about 58% of the Chinese market share in 2019, much more than other players.

Between the two types of heat treatment flour, the wet heat-treated flour held more market share with around 81% in 2019.
