Abstracts

Heat treatment in a salt bath using a salt melt furnace to achieve the object, to assist in forming a molten salt bath. By immersing them in a solution, they can also be used to perform various operations on components, including descaling, cleaning, annealing, tempering, hardening and other operations. Different types or compositions of salt are formulated to meet the functional requirements of operating at high temperatures above 150 to 1200 degrees Celsius. These salts are important ingredients used in various metal manufacturing, finishing and heat treatment processes in manufacturing, metal and mining, metallurgy and other special applications and industries.

Heat treatment salts are formed from inorganic compounds (such as a mixture of various salts) to provide the best melting point, working range and chemical characteristics. Heat treatment salt is mainly used in sealed packaging, and then heated in a furnace for packaging carburization. Heat treatment salts are used for descaling, annealing, steel quenching, austenite tempering, quenching, hardening, nitriding, carbonitriding, carburizing, solution treatment, deep brazing, cleaning and other treatment applications.

According to our (Global Info Research) latest study, the global Heat Treatment Salt market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
