The heated forceps are electrically heated instruments designed to assist in the orientation and positioning of histological specimens during embedding in paraffin wax. They incorporate safe, low-voltage heating elements which maintain an optimum temperature for manipulation of specimens in histological wax.

Forceps are available in three sizes: 1, 2 and 4mm with a choice of either serrated or smooth jaws. Smooth jaw forceps are ideal for handling fragile tissue specimens which are easily marked, whilst serrated jaws provide a strong grip for manipulating specimens.
