Abstracts

The global Heater Cooler Devices market size is expected to reach \$ 399 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Heater-Cooler Devices (HCDs) are specialized systems used in medical procedures, particularly during surgeries, to regulate a patient's body temperature. They play a crucial role in maintaining the necessary thermal conditions during complex procedures, such as heart surgeries, where precise temperature control is vital to support patient stability and minimize the risk of complications.

In 2025, global Heater Cooler Devices production reached approximately 4,814 units, with an average global market price of around K US\$ 59 per unit.

The upstream chain includes raw material suppliers (medical-grade metals, polymers, thermal fluids), component manufacturers (compressors, thermoelectric modules, precision temperature sensors, PID controllers, heat exchangers, and medical-grade pumps), and specialized parts producers, all feeding into device assemblers. The downstream chain involves medical device distributors, hospital procurement, and direct sales to healthcare facilities (operating rooms, ICUs, cardiac centers), supported by logistics, regulatory compliance, clinical training, and after-sales service for maintenance and calibration.

Material costs dominate at 45-55% of total costs, led by compressors/thermoelectric modules (25-35%), precision sensors and control electronics (15-20%), and medical-grade enclosures/fluid circuits (10-15%). Manufacturing accounts for 15-20%, covering assembly, rigorous thermal testing, and FDA/CE compliance validation. R&D and regulatory certification make up 10-15%, while logistics, warehousing, and

after?sales support represent 10?15%, with compressor and sensor price volatility driving major cost fluctuations.
