Abstracts

The global Heating Automatic Laminating Machine market size is expected to reach \$ 1254 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

The heated automatic laminating machine is a device used to laminate the surface of printed matter, packaging materials, etc. By heating the laminating material and combining it with the negative film or paper, the process of increasing the surface gloss, improving durability and protecting the effect is achieved. These machines can automatically complete laminating tasks, improve production efficiency, and are widely used in printing, packaging, advertising, education and other fields.

The industrial chain of heated automatic laminating machines mainly consists of upstream core component and material suppliers, midstream equipment manufacturers, and downstream application industries. Upstream includes suppliers of motors and transmission systems, heating components (heating rollers, temperature control systems), control systems (PLC, sensors), mechanical structural parts, and laminating materials (BOPP film, PET film, EVA film, etc.). These segments belong to the mechanical and electronic component manufacturing field, with gross profit margins generally ranging from 15% to 35%. Midstream consists of manufacturers of complete heated automatic laminating machines, responsible for equipment design, integration, and production. These products are mainly used in post-printing processing and packaging. Due to the technical barriers and customization requirements of the equipment, the gross profit margin in the equipment manufacturing segment is typically between 30% and 50%. Downstream mainly consists of end users such as printing plants, packaging companies, advertising production companies, publishing and printing industries, and label and paper product processing companies, who use lamination

processes to improve the wear resistance, water resistance, and appearance quality of their products. With the increasing demand for automation and high-efficiency production in the packaging and printing industry, heated automatic laminating machines are developing towards higher speeds, greater intelligence, and energy efficiency.

In 2025, sales of heated automatic laminating machines reached 194 k units, with an average price of US\$3,500 per unit. Total production capacity in 2025 was 270 k units.

As one of the important equipment in the modern printing and packaging industry, the heated automatic laminating machine not only improves the appearance, texture and protective performance of the product, but also greatly improves the production efficiency and automation level of the production line. It plays an important role in improving the quality and extending the service life of printed matter and packaging products, providing reliable solutions for various industries. With the continuous advancement of technology and the expansion of application scope, heated automatic laminating machines will continue to play an important role in various fields and promote the progress and development of the industry.
