## Abstracts

According to our (Global Info Research) latest study, the global Heave Compensated Cranes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

When the offshore crane loads and unloads cargo between the ship and the ship, the ship is affected by the waves, which will cause the cargo to shake. When lifting precision instruments and valuables in the air and underwater, the cargo may be damaged at least, and the operation safety may be serious. ACCIDENT. In order to improve the safety of crane offshore operations and increase the operating window, wave compensation technology is the most effective solution. The wave compensation system can compensate the heave movement of the suspended cargo caused by the influence of waves on the ship. Under the action of this system, the suspended cargo can remain relatively static. Even in complex sea conditions, the Active Heave Compensation System (AHC) can respond quickly and expand the range of wave height and wind speed when hoisting, as well as safe operation under severe working conditions.
